VCycene Monday Queue

Application review copy | Fictional scenario: Monday, October 5, 2026

DRAFT — NOT READY TO SUBMIT. Applicant recording and final access checks remain pending.

01 Open the tool

Open the verified repository on main

Run with Node 24 and npm. The verified application is on `main`:

```
git clone https://github.com/Raghuboi/VCycene-mini-project.git
cd VCycene-mini-project
npm ci
npm run dev
```

Open `http://localhost:5173`. The README explains the single-browser storage scope.

02 Build notes (150 / 200 words)

I used an AI coding assistant to build a React, TypeScript and Vite browser queue with TanStack Router and Query, Zod, shadcn-style controls, and the supplied CSV. The tool orders all twelve cases with a reason, keeps source records separate from internal notes, and saves status and note updates in this browser. Related cases are the extra feature.

The AI's first mobile layout clipped the priority reasons behind a horizontally scrolling table. I caught it in a real Chrome screenshot at 390 pixels wide and changed narrow rows into complete cards. I also tested a status and note surviving refresh, Back/Forward, an offline save, corrupt-data backup and recovery, and a genuine storage-quota failure that retained the draft without claiming success.

Next I would add follow-up ownership and reminders, so warehouse, engineering, and fulfillment dependencies do not disappear into notes. The app does not send messages, issue refunds, or file claims.

The customer and team responses follow. All names, tickets, and policies are fictional.

Customer and team responses

Scenario date: October 5, 2026 | Messages remain unsent

03 Maya written reply (114 / 150 words)

Hi Maya,

I'm sorry we closed your earlier tickets with restart advice and left your refund follow-up unanswered. You should not have had to chase us.

Your August 25 delivery is outside the standard 30-day refund window. I'll review your earlier contact history and ask my manager to consider a full refund exception if one is needed. I can't promise approval; warranty repair or replacement remains available.

I'll also ask our firmware engineer to investigate the cycle stopping after the update.

I'll update you by the end of Tuesday, October 6, even if I'm still waiting for an answer. If a refund is approved, payment follows warehouse confirmation that the returned unit has arrived.

04 Recording pending

APPLICANT ACTION REQUIRED: Record your own natural spoken response, upload it with evaluator-accessible link sharing, and replace this line with the playable URL. This is a submission draft, not the completed recording.

Talking points only: acknowledge the failed support history, recognize the refund request, explain the honest remedy path, and commit to the next update. Do not read a script.

05 Message to Wei (99 / 120 words)

Wei, possible 2.4.1 cycle issue across three customers: Maya (T-101) stops halfway after updating; Priya (T-103) stops after an hour after updating; Daniel (T-102) pauses mid-cycle with an amber light, onset unspecified. Maya received restart advice twice; T-109 is her follow-up, not another affected unit.

Samir's Wi-Fi setup issue and Sofia's amber light on 2.4.0 are separate.

No serial numbers or logs are supplied. By 3 p.m. today, please confirm whether this is known, safe guidance, and which diagnostics to collect. I'll request those diagnostics. If investigation needs longer, give a next-update time so I can keep customers informed.

06 Manager update (99 / 120 words)

Monday's queue review is complete: Tom's unfiled damage claim comes first, Maya's records concern the same unit, and three customers may share a 2.4.1 cycle issue. Customer and engineering messages are prepared as unsent drafts.

Pending actions: file Tom's claim today; obtain Wei's guidance, warehouse confirmation for Grace's returned unit, and fulfillment allocation/tracking for Hannah. These cases remain open.

Decision needed: if Maya's earlier contact history does not establish an in-window request, may I offer a full refund exception? Payment would still wait for warehouse confirmation.

I'll own the follow-ups and keep customers updated while these dependencies remain outstanding.
